Thanks!

David - the caller's name was [Ex. 6 - Personal Privacy]s and her phone number is [Ex. 6 - Personal Privacy]. Unfortunately, I don't think I can forward her message to a phone outside of our system so you can hear it, but her key point was that we should do an investigation in Dimock and that we should ensure that water continues to be provided to the residents, although she gave a lot of detail about what she understood the situation there to be. I'm not familiar enough with it myself to know if she had it right.

If you need anything else from me, let me know. I have not responded and was not planning to if somebody from the Region can take care of it, but if for any reason you won't be able to, let me know and I can respond, at least to let her know that I'm trying to find someone who can give her relevant information.

Keara- The short answer is David Sternberg is handling all our calls regrading Dimock.

I am involved, but we are continuing to review probably nearly a 1,000 pages of data at this point [Ex. 5 - Deliberative]
[Ex. 5 - Deliberative]
[Ex. 5 - Deliberative] We continue to look and have others provide technical assistance to our review..

Subject: caller on Dimock

Hi Karen-

I got a call from a citizen requesting an EPA investigation of the situation in Dimock and asking that EPA ensure that water continue to be delivered to those residents. Who should handle that call? I don't know if you're the person, but you've helped me in the past with R3 fracking issues, so I thought I'd start with you first.

Thanks!
